Selected Projects

gogo

- Built a Tauri desktop app for local **llm-wiki** knowledge bases, combining wiki browsing/editing, agent chat, session history, knowledge-base switching, onboarding, and provider configuration.
- Integrated Pi agent interaction into a local markdown knowledge workflow, with visible repository rules, schemas, skills, audit logs, security mode, and user-owned files.
- Documented architecture, session management, security boundaries, knowledge-base workflow, and developer setup.

oh-share-it

- Built an early shared research knowledge-base system with **server + cli + client + tests**, exposing routing, sync, URI, index, rules, and JSON API surfaces.
- Implemented file-based knowledge sharing primitives for search, read, route, sync, and structured API access across maintained markdown knowledge assets.

my-little-chatting-agent

- Built a FastAPI-based agent prototype with tool use, web search, page reading, local Markdown/FAISS retrieval, and workflow scanning.
- Combined local knowledge retrieval and external source reading in a simple agent loop for research and information monitoring workflows.

Research

Strategic User Offloading and Service Provider Pricing in Mobile Edge Computing

ICASSP 2026

Accepted paper

- Studied strategic user offloading and provider pricing in mobile edge computing using game-theoretic and optimization methods.

Public Work

- Publishes an open knowledge base on AI systems, knowledge workflows, product judgment, and career positioning: barytes.github.io/knowledge-base.
- Writes essays and technical notes on Applied AI and agent systems: barytes.substack.com.

Education

Sun Yat-sen University

Guangzhou, China

B.S. and M.S. in Software Engineering
